

Manufacturing for the Future: Our Environmental Promise

“

At Visual Systems Healthcare, we are passionate about creating a sustainable world. We acknowledge the specific impacts of our business on the natural environment and we are 100% committed to minimising this by continually improving our manufacturing processes, use of energy and waste disposal.

We have streamlined our production and are innovating new products that are environmentally friendly without compromising our high quality. Wherever possible we endeavour to use recycled materials in our manufacturing process, and are working towards a paperless system in our office.

Having been part of the Evergreen Assessment Pilot with NHS England, we strive to lead the way for other SMEs.

- Chris Hunter, Managing Director

”

New patient record holder has been designed to have less production waste & can be ground down and reused instead of thrown away

Pooling orders with similar locations for delivery to cut down on journeys, reducing c02 consumption

Strategic cutting processes to ensure minimal waste

Off-cuts of aluminium that can not be reused are stored and weighed-in annually for recycling

Refill board cleaner bottle scheme to eliminate single use plastic bottles

Use of non toxic adhesives in the manufacturing process

Reusing incoming packaging material for outgoing deliveries

Encouraging our suppliers to commit to improving their impact on the environment
